

GROUT INJECTION SPECIALISTS

	JOB DESCRIPTION Pevensey Bay	JOB No: 5812 DATE: 25 th April 2008
OBJECTIVE:	Consolidation of beach gravels to prevent draw down from adjoining properties.	
TECHNICAL DATA:	DRILLING:	POLYMERISATION TIME: 2 hrs
	DIAMETER: 19mm CENTRES: 1-2m ANGLES: Vertical DEPTH: 3.5m	INJECTION PRESSURE: 3-4 bar
	MATERIALS: O.P Cement	
COMMENTS: Neat cement was injected into beach gravels and achieved good permeation. Due to successful treatment the beach could be excavated in order to build further into the beach. Clear vertical faces can be seen with no losses of gravels from below the adjoining properties. Note. The angle of repose can be seen above the end wall where the excavated gravels have been collected.		
PRIOR TO TREATMENT:		COMPLETED TREATMENT:
